

# Project Setup Instructions

---

## Setting Up the Virtual Environment

To set up a Python virtual environment, follow these steps. This environment will help you manage the project's dependencies separately from your global Python setup.

### 1. Create the Virtual Environment:

Open your terminal and run the following command to create a new virtual environment named `env`:

```
python -m venv env
```

### 2. Activate environment:

```
.\env\Scripts\activate
```

### 3. Install Required packages

```
pip install -r requirements.txt
```
